Dear valued customer,

We would like to inform you that BASF will supply the product **Lupranol 3300** with a new specification, with a target date of **Sept 1st, 2022**.

The current specification of alkalinity of **max. 15 mg K/kg** will be changed to **max. 30 mg K/kg**. The reasons for this are minor changes in the workup-process in our polyol production, which make this change unavoidable.

During extensive internal testing over the last few months, we found no significant changes in the performance of **Lupranol 3300** in polyurethane system formulations.

Please initiate all necessary processes within your organization regarding the new specification of Lupranol 3300 and distribute this information to whom it might concern. In case you have any questions regarding this topic, or you would like to receive more detailed information, please feel free to contact your local BASF sales representative.

We appreciate your business and apologize for any inconvenience this change may cause.

We look forward to continue our fruitful relationship.

Yours Sincerely,

Stefan Ullmann
